What to do

1. Total Revenue - Total revenue generated - Show today's/monthly comparison - Trend indicator
2. Total Sales -Number of successfully completed sales - Growth indicator

3. Total Customers - Total customers in CRM - Growth indicator
4. Active Projects - Number of currently active projects - Growth indicator

Revenue & Sales Analytics Left Side (70%) Revenue & Sales Trend Display a line chart. Filters: - Today - This Week - This Month - This Year Allow switching between time periods.
Right Side (30%) Sales Status Display a Doughnut/Pie chart showing: - Completed Sales - Pending Sales - Sales On Hold Show percentages and totals.

Left Side Branch Performance Display a ranked table. Columns: - Rank - Branch Name - Revenue - Total Sales - Performance % - Status Include: View All button

Right Side Top Performing Employees Display top employees. Columns: - Employee Name - Branch - Sales - Revenue - Performance Score Include: View All button
Left Side Property Inventory Summary Display cards or progress bars showing: - Total Properties - Available - Booked - Sold Include property distribution visualization.
Right Side Lead & Booking Pipeline Display funnel or stage cards. Stages: - New Leads - Follow-ups - Site Visits - Bookings - Registrations - Closed Sales Each stage should show count.
Left Side Pending Approval Requests Display approval requests requiring Admin action. Example: Customer Name Project Requested Discount Requested By Requested Date Status Actions: Approve Reject View Details

Right Side Attendance Summary Display attendance overview. Show: Employees Present Employees Absent Sub-Admins Present Sub-Admins Absent Attendance Percentage View Attendance button.
Left Side Recent Bookings Table Columns Customer Project Property Sales Executive Booking Date Status View All button.
Right Side Recent Notifications Display latest notifications. Examples: New booking created Discount approval request received Registration completed Project updated Employee added View All button.

Recent Activity Logs Display latest system activities. Columns: Time User Role Module Action Status Include: View All Logs button.
Global Search Notification Icon Profile Menu
Highlight: Dashboard
Branches Subtitle: Manage all company branches, assign branch managers, monitor performance, and track branch-wise business operations.

+ Add Branch Search Filters Export
1. Total Branches - Total active branches
2. Total Employees - Total employees across all branches
3. Total Revenue - Total revenue generated by all branches
4. Total Sales - Total completed sales across all branches
Display all branches. Columns: Branch Name, Branch Code, City, Assigned Sub-Admin, Employees, Projects, Customers, Revenue, Sales, Status, Actions,
Actions include: View, Edit, Delete
Branch Information
Show: Branch Name, Branch Code, Address, City, Contact Number, Email, Status.
Created DateAssigned Sub-Admin
Show: Profile Photo, Name, Employee ID, Email, Mobile Number, Joining Date,
Buttons: Change Sub-Admin, View Profile. Employee Summary
Display: Total Employees, Active Employees, Present Today, Absent Today, View Employees button.

The Admin should be able to assign business targets to each branch. Provide an "Assign Target" button. Admin can assign: • Sales Target • Revenue Target • Booking Target Each target should include: Target Type Target Value Start Date End Date Remarks (Optional) Show Target Progress
Display: Assigned Target, Achieved Target, Remaining Target, Completion Percentage, Target Status.
Examples: Not Started, In Progress, Completed, Exceeded
Display progress using progress bars or circular progress indicators.
Include an Edit Target button.

Display: Total Revenue, Total Sales, Total Customers, Total Bookings, Conversion Rate
Table Columns: Project Name, Builder, Property Type, Available Units, Booked Units, Sold Units
Columns: Customer, Project, Property, Sales Executive, Booking Date, Status
Revenue: Trend Display a monthly revenue chart. Sales Trend: Display monthly sales chart. Employee Performance
Display top-performing employees in this branch.
Columns: Employee, Sales, Revenue, Performance Score
Display: Total Properties, Available, Booked, Sold, Use cards or progress bars.

Display: Employees Present, Employees Absent, Sub-Admin Present, Attendance Percentage, View Attendance button
Examples: New employee joined, Booking completed, Customer assigned, Discount approval received, Registration completed
Columns: Time, User, Role, Module, Action, Status, View All Logs button

Display comparison table. Columns: Branch, Revenue, Sales, Customers, Employees, Assigned Target, Achieved Target, Completion %, Performance

Branch, City, Sub-Admin, Status, Date Range
Search by: Branch Name, Branch Code, City, Sub-Admin
Employees Subtitle: Manage all employees, branch assignments, transfers, attendance, performance, and sales activities.
+ Add Employee Export Import Search Advanced Filters
1. Total Employees Total active employees.
2. Employees Present Today Today's attendance summary.
3. Total Revenue Generated Revenue generated by all employees.
4. Total Sales Total completed sales by employees.
• Branch • Assigned Sub-Admin • Employee Status - Active - Disabled - Transferred • Performance - Top Performer - Average - Low Performer • Target Status - Completed - In Progress - Pending • Joining Date • Date Range
Search should support: Employee Name, Employee ID, Email, Mobile Number

Columns, Profile, Employee Name, Employee ID, Role, Branch, Assigned Sub-Admin, Mobile Number, Joining Date, Active Leads, Revenue Generated, Target Progress, Last Login, Status, Actions
Example ₹65L / ₹1Cr 65% or 15 / 20 Sales Show progress using a progress bar.

Examples Today 10:20 AM Yesterday 3 Days Ago
Show indicator. Examples Never Transferred Transferred 2 Times Clicking it opens transfer history.
Instead of only Transfer and Disable, provide: View Details Edit Transfer Branch Disable
Clicking "Transfer Branch" opens a modal. Workflow Select New Branch - Automatically load available Sub-Admins of that branch. - Select New Assigned Sub-Admin - Transfer Date - Reason - Transfer Existing Leads? Yes / No - Transfer Existing Tasks? Yes / No - Attendance History Automatically retained - Confirm Transfer
Automatically update: Current Branch, Assigned Sub-Admin, Future Leads, Future Tasks, Performance under new branch, Previous transfer history must remain available.
SECTION 1 Personal Information: Profile Photo, Employee Name, Employee ID, Role, Mobile Number, Email, Joining Date, Status

SECTION 2 Organization Details: Current Branch, Assigned Sub-Admin, Reporting Manager, Previous Branch
SECTION 3 Target Summary: Assigned Target, Achieved Target, Remaining Target, Achievement %, Target Status
SECTION 4 Sales Performance: Revenue Generated, Completed Sales, Customers Handled, Bookings, Registrations, Conversion Rate

SECTION 5 Attendance Summary: Present Days, Absent Days, Leave Taken, Attendance %, Late Check-ins
SECTION 6 Lead Summary: Assigned Leads, Active Leads, Closed Leads, Lost Leads, Follow-ups
SECTION 7 Assigned Projects: Display projects currently assigned.

SECTION 8 Transfer History: Columns, Transfer Date, From Branch, To Branch, Previous Sub-Admin, New Sub-Admin, Approved By, Reason

SECTION 9 Recent Activities: Examples, Lead Created, Booking Completed, Registration Completed, Site Visit Scheduled, Follow-up Updated

SECTION 10 Activity Timeline: Example- Employee Created - Assigned to Pune Branch - Target Assigned - Transferred to Mumbai Branch - Booking Completed - Promotion
Property Inventory Subtitle: Manage builders, projects, inventory, unit availability, reservations, bookings, and property lifecycle.
Keep Existing Features: • Builder Filter • Project Filter • Status Filter • Search by Unit Number Current Table Columns: • Unit / Project • Configuration • Area • Base Price • Status • Lock / Release Do not remove any of these.
Display four KPI cards: 1. Total Properties 2. Available Units 3. Booked Units 4. Reserved / Locked Units
Add, Property Type, Configuration, Tower / Wing, Floor, Price Range, Area Range, Availability, Booking Status, Assigned Sales Executive
Keep existing columns and add: Property Type, Tower / Wing, Floor, Parking, Assigned Sales Executive, Customer Name (Only if booked or reserved), Booking Date, Lock Expiry, Last Updated
Replace the single Lock/Release action with: View Details, Edit Property, Lock Property, Release Lock, View Booking
Basic Information, Property Image, Unit Number, Builder, Project, Property Type, Tower / Wing, Floor, Configuration, Area, Facing, Parking. Pricing, Base Price, Current Price, Discount, Final Price. Current Status, Available,Reserved, Locked, Booked, Sold. Booking Information, Customer Name, Sales Executive, Booking Date, Registration Status. Documents, Floor Plan, Price Sheet, Agreement, RERA Document, Brochure.
Property Timeline: Property Added - Reserved - Locked - Booked - Registered - Sold.

Keep Existing Components: Builders, Projects, Builder Status, Project Status, Onboard Builder, Register Project. Do not remove existing functionality.
Display, Total Builders, Total Projects, Active Projects, Ready To Move Projects

Keep existing information and additionally display: Builder Logo, Contact Person, Mobile Number, Email, City, Total Projects, RERA Expiry Date, Builder Status, Commission Agreement, Buttons- View, Edit, Deactivate

Keep existing information and additionally display: Project Image, Project Type, Location, Builder, Total Units, Available Units, Booked Units, Sold Units, Launch Date, Possession Date, RERA Number, Commission Percentage, Project Status, Buttons- View, Edit, Manage Inventory

Builder Information, Logo, Builder Name, Contact Person, Mobile, Email, Office Address, GST Number, RERA Registration. Projects: Display all registered projects. Business Performance: Total Revenue, Total Sales, Bookings, Customers. Commission Details: Commission Percentage, Special Agreements. Activity Timeline: Builder Onboarded - Project Registered - Commission Updated - Project Completed.

Project Overview, Project Image, Project Name, Builder, Location, Project Type, RERA Number, Launch Date, Possession Date, Current Status. Inventory Summary: Total Units, Available, Reserved, Booked, Sold. Pricing Summary: Minimum Price, Maximum Price, Average Price. Configuration Summary: 1 BHK, 2 BHK, 3 BHK, Commercial, Plot, Bungalow, Row House. Amenities: Display project amenities. Documents: Brochure, Floor Plans, Master Layout, Price Sheet, RERA Certificate. Sales Summary: Revenue Generated, Bookings, Registrations, Conversion Rate. Assigned Employees: Display sales executives working on this project. Project Timeline:
Project Registered - Inventory Uploaded - Bookings Started - Registrations - Project Completed

The Property Inventory module must remain connected with the entire CRM. Builders - Projects - Inventory - Bookings - Registrations - Revenue - Reports - Dashboard. Maintain the following relationships automatically: • One Builder can have multiple Projects. • Every Project contains multiple Inventory Units. • Every Inventory Unit belongs to exactly one Project. • Booking automatically updates Inventory Status. • Registration automatically updates Booking Status. • Customer details should appear automatically for booked or reserved units. • Assigned Sales Executive should appear automatically after booking. • Revenue should automatically update Dashboard and Reports. • Property Lock should display: - Locked By - Locked Date & Time - Lock Expiry - Manual Release option • Property status should update automatically across the entire application whenever a booking, reservat

Keep the following columns exactly as they are: • Lead Name • Contact • Budget Range • Configuration • Acquisition Source • Assignee Agent • Funnel Stage
Add New Lead, Run Allocator, Search
Stage, Branch, Assigned Sub-Admin, Assigned Agent, Acquisition Source, Interested Project, Budget Range, Date Range
Add the following columns: Interested Projects, Branch, Last Follow-up, Next Follow-up, Created On

A single lead can be linked to multiple interested projects until the final booking is completed. Display multiple projects as tags. Example: Lodha Belmondo, Godrej Hillside, VTP Blue Waters. Provide: + Add Project, Remove Project, Update Project Interest Status

Each interested project should have its own status. Examples: Interested, Brochure Shared, Site Visit Scheduled, Site Visit Completed, Shortlisted, Negotiation, Not Interested
Provide: View, Edit, Assign / Reassign, Transfer, View Timeline
Section 1: Customer Information, Profile Photo, Lead Name, Mobile Number, Email, Address. Section 2: Requirements, Budget Range, Property Type, Configuration, Preferred Location. Section 3: Interested Projects, Display all interested projects. Each project should show: Project Name, Current Status, Last Updated, Buttons: Add Project, Remove Project. Section 4: Follow-up History, Display complete follow-up history. Section 5: Site Visit History, Upcoming Visits, Completed Visits, Cancelled Visits. Section 6: Assignment Details, Current Branch, Assigned Sub-Admin, Assigned Employee. Section 7: Timeline
Lead Created - Assigned - Follow-up - Site Visit - Negotiation - Booked

Admin Can view every lead. Can assign or reassign leads. Can transfer leads between branches. Can manage project interests. Sub-Admin Can only access leads belonging to their branch. Can assign leads to employees within their branch. Employee Can access only assigned leads. Can update follow-ups, site visits, and project interests.
Keep the following columns exactly as they are: • Buyer Entity • Contact Information • KYC Compliance • Owner Branch • Assigned Agent (Ownership Tag) • Transfer Tag
Branch, Assigned Agent, KYC Status, Booking Status, Registration Status, Project, Transfer Status, Date Range
Add: Linked Project, Selected Property Unit, Booking Status, Registration Status, Buyer Since, Last Updated
Provide: View, Edit, Update KYC, Transfer Ownership, View Booking
Section 1: Buyer Information, Profile Photo, Buyer Name, Mobile Number, Email, Address. Section 2: KYC Documents, PAN, Aadhaar, Address Proof, Photograph. Section 3: Property Information, Builder, Project, Unit Number, Property Type. Section 4: Booking Information, Booking Date, Booking Status, Registration Status, Agreement Status. Section 5: Ownership Information, Current Branch, Assigned Sub-Admin, Assigned Employee, Transfer History. Section 6: Timeline - Buyer Created - KYC Uploaded - Booking - Registration - Possession. Lead Created - Assigned to Branch -
Assigned to Sub-Admin - Assigned to Employee - Multiple Interested Projects - Follow-ups - Site Visits - Final Project Selected - Unit Selection - Discount Approval (If Required) - Booking - Buyer Onboarding (KYC) - Registration - Sale Completed

One lead can have multiple interested projects until booking. Once booking is completed: Only one project becomes the Final Booked Project. The selected project is linked automatically with: Inventory, Selected Property Unit, Booking, Buyer (KYC), Registration. The remaining interested projects should automatically be marked as "Not Selected" while remaining visible in the lead history. Every update should automatically reflect throughout the CRM, including Dashboard, Branches, Projects, Inventory, Bookings, Reports, and role-specific screens.

Booking Registers. Subtitle: Manage property bookings, payments, buyer details, registration progress, commissions, and sale completion.

add Register Property Sale, Export, Search, Advanced Filters
Display four KPI cards. 1. Total Bookings 2. Reserved Bookings 3. Confirmed Bookings 4. Sales Completed
Booking Status, Branch, Project, Builder, Assigned Employee, Assigned Sub-Admin, Payment Status, Registration Status, Booking Date, Date Range, Search by, Buyer Name, Booking ID, Mobile Number, Property Unit

Keep the existing table and enhance it. Columns, Booking ID, Booking Date, Buyer, Project, Property Unit, Assigned Employee, Branch, Sale Value, Approved Discount, Final Sale Value, Brokerage / Commission, Payment Status, Registration Status, Booking Status, Actions
Supported statuses, Reserved, Confirmed, Cancelled, Sale Completed
Pending, Partial, Completed
Pending, In Progress, Completed, Registration is part of Booking. Do NOT create a separate Registration module.
View Details, Confirm Booking, Cancel Booking, Edit Booking, Print Booking

Section 1: Booking Information, Booking ID, Booking Date, Booking Status, Booking Source. Section 2: Buyer Information, Buyer Name, Mobile Number, Email, Address, KYC Status. Section 3: Property Information, Builder, Project, Property Unit, Property Type, Configuration, Area. Section 4: Pricing, Base Price, Approved Discount, Final Sale Value, Brokerage /Commission. Section 5: Payment Information, Total Amount, Amount Paid, Balance Amount, Payment Status, Payment History. Section 6: Registration Information, Registration Status, Registration Date, Agreement Upload, Agreement Number, Remarks. Keep all registration-related information inside this page. Section 7: Assigned Team, Branch, Sub-Admin, Sales Executive. Section 8:
Booking Timeline
Lead Created - Site Visit - Property Selected - Discount Approved - Booking Reserved - Booking Confirmed - Payment Completed - Registration Completed - Sale Completed. Section 9: Activity Logs. Display complete activity history.

Booking is created only from an existing Lead/Buyer. One booking is linked to:
• One Buyer • One Project • One Property Unit • One Branch • One Assigned Employee • One Assigned Sub-Admin After booking confirmation: Inventory Status should automatically change. Buyer profile should update automatically. Revenue should update Dashboard. Reports should update automatically. Commission should be calculated automatically. Registration information should remain inside Booking Details. When a booking is cancelled: Inventory should become Available automatically. Booking status should update everywhere. Reports should refresh automatically.

Previous Value- Updated Value

Lead - Assigned to Branch - Assigned to Employee - Follow-ups - Multiple Interested Projects - Final Project Selected - Property Unit Selected - Booking Reserved - Booking Confirmed - Payment Process - Registration Details Updated - Sale Completed
Commission Rules. Subtitle: Manage brokerage commission rules and test commission calculations.
Add Rule, Search, Filters
Display all commission rules as cards or a table. Each rule should contain: Rule Name. Applicable To • All Builders • Specific Builder • Specific Project. Commission Percentage Threshold Accelerator Status Last Updated

View, Edit, Activate, Deactivate, Delete. Only one rule should be Active for the same scope at a time.
Basic Information, Rule Name, Applicable To, All Builders, Specific Builder, Specific Project, Builder Selection (when applicable), Project Selection (when applicable), Commission Percentage (%), Threshold Amount (Optional), Accelerator Percentage (Optional) Status, Active, Inactive, Buttons, Save, Cancel
Keep a Brokerage Sandbox for testing. Purpose: Allow the Admin to test how a commission rule calculates brokerage before activating it. This sandbox is for simulation only. It must NOT modify any booking or commission records. Sandbox Fields, Property Value, Brokerage Percentage, Threshold, Accelerator

Display, Base Commission, Additional Commission (if Threshold/Accelerator applies), Total Brokerage, Commission Split Preview, Example Office Executive Branch The preview is only for testing and should not save any data.

The Commission Rules module must remain connected with the Booking Module. Workflow Admin Creates Rule - Admin Tests Rule using Brokerage Sandbox - Rule Activated - Booking Confirmed - System Automatically Applies Matching Rule - Brokerage Calculated Automatically - Commission Stored with Booking - Dashboard Updated - Reports Updated - Employee Commission Updated
The Booking module should never ask the Admin to manually calculate brokerage. The system should automatically: • Detect the applicable commission rule. • Calculate brokerage. • Store brokerage with the booking. • Update Dashboard. • Update Reports. • Update Employee earnings. If a commission rule is modified, only future bookings should use the updated rule. Previously confirmed bookings must retain the commission calculated at the time of confirmation.

Discount Overrides. Subtitle: Review and approve discount requests submitted by Employees through Sub-Admins.
Display four KPI cards. 1. Pending Requests 2. Approved Requests 3. Rejected Requests 4. Discounts Approved This Month
Search, Filters, Export
Status, Branch, Sub-Admin, Employee, Project, Date Range

Display: Request Date, Customer Name, Project, Property Unit, Requested By (Employee), Branch, Requested Discount, Final Approved Discount, Reason / Justification, Status, Actions
Pending, Approved, Rejected
View Details Approve Reject
Section 1: Customer Information, Customer Name, Mobile Number, Project, Property Unit. Section 2: Request Information, Request Date, Requested By, Sub-Admin, Branch, Requested Discount, Reason / Justification. Section 3: MANUAL DISCOUNT CALCULATOR- Purpose: Allow the Admin to calculate a custom discount before approving the request. Inputs, Property Price (Auto-filled), Requested Discount (Read Only), Approved Discount (Editable), Automatically Calculate- Discount Amount (₹), Final Sale Value (₹), Customer Savings (₹). Buttons, Apply Discount & Approve, Reject Request. Section 4: Approval History Employee Requested - Sub-Admin Reviewed - Admin Decision

Employee Requests Discount - Sub-Admin Reviews & Forwards - Admin Opens Request - Manual Discount Calculator - System Calculates Final Sale Value - Admin Approves / Rejects - Booking Updated Automatically - Revenue Updated - Commission Recalculated - Dashboard Updated - Reports Updated

Employees cannot directly approve discounts. Sub-Admins can only review and forward requests. Admin has the final authority. Admin may approve the requested discount or apply a custom discount. Once approved: • Booking Final Sale Value updates automatically. • Discount Amount is stored with the booking. • Revenue updates automatically. • Commission recalculates automatically. • Dashboard updates automatically. • Reports update automatically. Rejected requests should not modify any booking data.

Reports Vault. Subtitle: Generate business reports, performance insights, sales analytics, inventory reports, commissions, and operational summaries.
Global Search, Date Range Filter, Export Report, Download PDF, Export Excel

Branch-wise Sales Performance. Display: Branch, Total Employees, Total Sales, Revenue Generated, Assigned Target, Achieved Target, Target Completion %, Performance, Export CSV, Data Source, Branches, Bookings, Employees.

Commission Report. Display: Total Brokerage Generated, Table Columns, Date, Buyer, Project, Property, Sale Value, Brokerage, Commission Rule Applied, Assigned Employee, Branch, Export CSV, Data Source, Commission Rules, Booking Registers.
Property Inventory Status Replace the existing RERA Inventory Status Audit. Display KPI Cards, Available, Reserved, Locked, Booked, Sold. Below KPI Cards display a table. Columns, Unit Number, Project, Builder, Property Type, Status, Current Holder, Last Updated, Export CSV, Data Source, Property Inventory, Booking Registers.

Lead Conversion Report Display: Total Leads, Qualified Leads, Site Visits, Bookings, Completed Sales, Conversion Rate. Display Funnel Visualization. Export CSV, Data Source, Leads & Buyers, Booking Registers.

Booking Report Display: Total Bookings, Reserved, Confirmed, Cancelled, Completed Sales, Table Columns, Booking ID, Buyer, Project, Property Unit, Employee, Branch, Sale Value, Booking Status, Booking Date, Export CSV, Data Source, Booking Registers.
Employee Performance Report Display: Employee Branch Assigned Leads Bookings Sales Revenue Target Achievement % Export CSV Data Source Employees Bookings
Discount Approval Report Display: Request Date, Customer, Project, Employee, Branch, Requested Discount, Approved Discount, Status, Approved By Export CSV, Data Source, Discount Overrides, Booking Registers.

Date Range, Branch, Builder, Project, Employee, Sub-Admin, Booking Status, Lead Status, Property Status.
All reports must be generated automatically. No manual data entry is allowed. Data should always come from connected modules. Examples Branch Performance - Branches + Employees + Bookings Commission Report - Commission Rules + Booking Registers Inventory Report - Property Inventory + Booking Registers Lead Report - Leads & Buyers Booking Report - Booking Registers Employee Performance - Employees + Bookings Discount Report - Discount Overrides + Bookings Whenever data changes anywhere in the CRM, reports should automatically refresh
Office Settings. Subtitle: Manage global operational settings for the Real Estate CRM.
Fields • Standard Discount Cap (%) Purpose: This is the maximum discount Employees/Sub-Admins can request without exceeding the company's standard limit. Connected Module: • Discount Overrides • Inventory Lock Window (Hours) Purpose: Defines how long a property remains locked before it is automatically released if the booking is not completed. Connected Module: • Property Inventory
Fields • Booking Validity (Days) Purpose: Defines how many days a booking remains valid before expiring if not completed. • Auto Cancel Unconfirmed Booking Options • Enabled • Disabled Purpose: Automatically cancel bookings that remain unconfirmed after the configured validity period. Connected Module: • Booking Registers
Fields • Auto Lead Assignment Options • Enabled • Disabled • Assignment Method Options • Manual • Round Robin Purpose: Defines how new leads are assigned to employees. Connected Modules • Leads & Buyers • Employees & HR
Fields • Office Start Time • Office End Time • Half-Day Threshold (Hours) Purpose: These settings are used for attendance calculations across the organization. Connected Module • Employees & HR

Allow Admin to enable or disable notifications for: • New Lead Assignment • Discount Requests • Booking Confirmation • Employee Transfer • Attendance Alerts Purpose: Control company-wide notification preferences. Connected Modules • Leads & Buyers • Discount Overrides • Booking Registers • Employees & HR
Button: Save Settings. After saving, all changes should automatically apply across the connected CRM modules.
Office Settings should contain only company-wide default configurations. Do NOT configure the following here: • Commission Rules (handled in Commission Rules module) • Discount Approval Logic (handled in Discount Overrides module) • Booking Data (handled in Booking Registers) • Employee Permissions (handled in Employees & HR) Every setting changed here should automatically reflect in the corresponding connected modules without requiring duplicate configuration.

My Profile. Subtitle: Manage your personal information, account details, and security settings.
Display: • Profile Photo • Full Name • Email Address • Company Name • Role (Company Admin) • Company ID (Optional) Buttons: • Edit Profile

Display: • Mobile Number • Alternate Mobile Number (Optional) • Designation • Upload / Change Profile Photo Buttons: • Save Changes • Cancel

Display: • Change Password Fields Current Password New Password Confirm Password Display: • Last Login • Last Password Changed Buttons: • Update Password
Only the logged-in Admin can edit their own profile. Email Address and Company ID should be read-only. Changing the password requires entering the current password. Profile updates should immediately reflect in the application's header/profile section.

ADMIN SIDE

Notes

Each KPI card should contain: - Icon - Title - Large value - Small comparison text - Up/Down trend indicator

Design Requirements

Generate the UI/UX for this module by following these Common Design Requirements. These requirements apply to every screen, tab, popup, drawer, table, form, dashboard, and workflow for all roles (Admin, Sub-Admin, and Employee). Do not change any existing business logic, permissions, workflows, or data structure already defined. These requirements are only for design and user experience.

COMMON DESIGN REQUIREMENTS

1. Design Philosophy
- Prioritize UX over visual effects.
- Keep interfaces simple, clean, modern, professional, and scalable.
- Reduce user clicks wherever possible.
- Maintain consistency across all modules.
- Every screen should be responsive and production-ready.
- Design should support future feature expansion without redesign.

2. Layout
- Maintain consistent page structure throughout the application.
- Header, filters, content area, action buttons, and footer spacing should remain consistent.
- Use proper visual hierarchy.
- Keep sufficient white space.
- Follow consistent spacing, padding, margins, and alignment.
- Maintain consistent card, table, and form widths.

3. Navigation
- Active menu should always be highlighted.
- Breadcrumbs wherever required.
- Page title should clearly identify current location.
- Frequently used actions should be easily accessible.
- Avoid unnecessary navigation steps.

4. Dashboard Design
- KPI cards should have consistent style.
- Charts should be clean and readable.
- Show empty state when data is unavailable.
- Support loading and error states.
- Cards should be clickable only where applicable.

5. Tables
- Sticky table header.
- Sticky action column when necessary.
- Sorting.
- Searching.
- Filtering.
- Pagination.
- Adjustable rows per page.

- Column visibility management if required.
- Proper alignment of numbers, text, dates, and currency.
- Long text should truncate with tooltip.
- Status should use colored badges.
- Row selection where applicable.
- Bulk selection only where allowed.
- Export option only if already defined in existing flow.
- No horizontal scrolling unless absolutely necessary.

6. Search & Filters
- Global search where applicable.
- Instant search with debounce.
- Advanced filters inside expandable panel or drawer.
- Filter chips showing active filters.
- Clear All filters.
- Remember filter state until page refresh if applicable.
- Date range picker where applicable.

7. Forms
- Group related fields logically.
- Clearly distinguish mandatory and optional fields.
- Proper labels and placeholders.
- Inline validation.
- Real-time validation wherever possible.
- Helpful error messages.
- Character counters where needed.
- Auto focus on first field.
- Keyboard accessible.
- Prevent accidental data loss.
- Warn before leaving unsaved form.

8. Buttons
- Maintain consistent hierarchy:
  - Primary
  - Secondary
  - Tertiary
  - Danger
- Disable buttons when action is not allowed.
- Show loading state after click.
- Prevent duplicate submissions.

9. Modals / Dialogs / Drawers
- Use confirmation dialog for destructive actions.
- Close confirmation if unsaved changes exist.
- Proper titles.

- Clear primary action.
- Proper secondary action.
- ESC support where appropriate.

10. Status System
Maintain consistent status colors across entire CRM.

Examples:
- Success
- Pending
- Approved
- Rejected
- Cancelled
- Active
- Inactive
- Completed
- Draft
- Overdue

Never use inconsistent colors for same status.

11. Notifications
- Success messages.
- Error messages.
- Warning messages.
- Informational messages.
- Non-blocking toast where appropriate.
- Confirmation messages after successful actions.

12. Loading States
- Skeleton loaders.
- Spinner only when required.
- Progressive loading wherever possible.
- Empty state illustrations/messages.

13. Error Handling
- Friendly error messages.
- Retry option.
- Validation errors clearly highlighted.
- Network failure handling.
- Permission error handling.
- Record not found state.

14. Accessibility
- Proper contrast ratio.
- Keyboard navigation.

- Screen-reader friendly labels.
- Focus indicators.
- Accessible form controls.
- Do not rely only on color.

15. Mobile & Responsive
- Fully responsive.
- Tablet support.
- Mobile support where applicable.
- Proper stacking of cards.
- Responsive tables.
- Responsive filters.
- Responsive forms.

16. Icons
- Use meaningful icons.
- Keep icon style consistent.
- Do not overuse icons.
- Every action icon should have tooltip.

17. Color Usage
- Use semantic colors only.
- Keep primary actions visually consistent.
- Do not use random colors.
- Warning and destructive actions should be visually distinguishable.

18. Typography
- Maintain consistent heading hierarchy.
- Consistent font sizes.
- Proper line height.
- Good readability.
- Consistent text styles.

19. Empty States
Every empty screen should explain:
- Why no data exists.
- What user can do next.
- CTA button if applicable.

20. Action Visibility
Display actions strictly according to existing role permissions already defined.
Do not expose actions users cannot perform.
Do not modify permission logic.

21. History & Logs
Whenever history, timeline, activity log, audit trail, approval history, transfer history, booking history, customer history, lead history, or any existing log is part of the defined workflow:

- Show records in chronological order.
- Display timestamp.
- Display user who performed the action.
- Display previous value and new value where applicable.
- Keep history read-only.
- Never allow editing of historical records.

22. Approval Screens
If a module contains approval workflow already defined:
- Clearly show request status.
- Show requester.
- Show approver.
- Show request date.
- Show approval history.
- Show remarks if available.
- Highlight pending actions.

23. Data Safety
- Confirmation before destructive actions.
- Soft delete visualization if applicable.
- Prevent duplicate records where applicable.
- Auto-save only if already defined.
- Do not change business rules.

24. Consistency
All modules must use:
- Same spacing
- Same cards
- Same tables
- Same forms
- Same buttons
- Same filters
- Same badges
- Same typography
- Same color system
- Same interaction patterns

25. Performance UX
- Fast page rendering.
- Lazy loading where applicable.
- Minimize unnecessary animations.
- Keep interactions smooth.

26. Design System
Use reusable components only.
Maintain consistency with the existing CRM design system.

Avoid creating duplicate UI patterns.

27. Existing Flow Protection
These design requirements must work with the existing Admin, Sub-Admin, and Employee modules already defined.
Do not modify:
- Business logic
- User roles
- Permissions
- Approval hierarchy
- Workflows
- Field definitions
- Existing module behavior
- Existing navigation
- Existing relationships between modules

These requirements are strictly UI/UX design standards and should enhance usability without changing any previously approved functionality.

What to do

Display only the Top 3 critical branch alerts. Examples: • Duplicate Customer • Inventory Conflict • Payment Due • Follow-up Overdue • Pending Approval Include a "View All Alerts" action.

Display: • Today's Leads • Scheduled Site Visits • Monthly Bookings • Total Revenue • Present Staff • Staff on Leave • Pending Approvals • Branch Target Progress Each KPI should support click navigation to its respective module.

Show only requests requiring Sub-Admin action. Examples: • Discount Approval • Leave Approval • Lead Transfer Approval • Booking Approval (if applicable) • Customer Hold Request Each card should provide Approve and Reject actions.

Display: • Due Today • Completed • Overdue Provide quick navigation to Follow-up Management.

Display upcoming scheduled visits. Include: • Customer Name • Employee • Project • Visit Time • Status

Display employee performance. Columns: • Employee Name • Leads Assigned • Follow-ups Completed • Site Visits • Bookings • Revenue Generated Display only employees belonging to the assigned branch.

Display: • Due Today • Collected Today • Overdue Payments Quick navigation to Payment Management.

Display weekly revenue trend.

Show Employee Target vs Achievement. Display: • Assigned Target • Achieved Revenue • Completion Percentage

Display lead sources. Examples: • Website • Housing • 99acres • MagicBricks • Google Ads • Reference • Walk-in

Display latest branch activities. Examples: • Employee Created • Lead Assigned • Customer Added • Booking Created • Payment Received • Receipt Generated • Site Visit Completed Include "View All Logs".

Display shortcuts based on permissions. Examples: • Add Lead • Add Customer • Create Booking • Add Employee • Schedule Site Visit Hide actions if permission is not granted by Admin.

Create the following tabs: • Discounts • Bookings • Leaves • Lead Reassignments • Staff Transfers • Inventory Holds • Circulars Display the pending request count on each tab.

Each request card/table should display: • Request ID • Request Type • Employee Name • Customer Name (if applicable) • Project • Builder • Request Details • Requested On • Status • Attachments (if available)
Sub-Admin can perform only: • Forward to Admin • Request Changes • Reject When "Request Changes" or "Reject" is selected, Remarks are mandatory.
Provide filters for: • Employee • Project • Builder • Request Type • Status • Date Include keyword search.
Allow Bulk Actions only for non-financial requests.
Supported: • Approve Selected • Reject Selected Applicable for: • Leave Requests • Circulars Do NOT allow bulk actions for: • Discounts • Bookings • Inventory Holds
Employee ↓ Submit Request ↓ Sub-Admin Sub-Admin can: • Forward to Admin • Request Changes • Reject If forwarded, the request is sent to the Admin Action Center.
Admin can: • Approve • Reject • Request Changes
Notify Employee when: • Request Rejected • Changes Requested • Request Forwarded to Admin Notify Sub-Admin when: • New Request Submitted • Admin Approved Request • Admin Rejected Request • Admin Requested Changes
Notify Admin when: • New Request Forwarded by Sub-Admin
Display Assigned Employees. Features: • Employee Search • Employee List • Employee Status Indicator • Employee Name • Designation • Quick Selection Selecting an employee loads all related information on the right panel.
Display: • Employee Photo / Avatar • Employee Name • Employee ID • Designation • Status Quick Actions: • Edit Employee • Assign Task • Assign Lead
Create the following tabs: 1. Overview 2. Leads 3. Follow-ups 4. Attendance 5. Site Visits 6. Tasks 7. Performance 8. Activity Timeline 9. Documents
Display: • Total Leads • Conversion Rate • Site Visits • Attendance % Employee Information: • Email • Mobile • Branch • Joining Date • Employment Status
KPIs: • Total Leads • New • In Progress • Qualified • Closed Lead Table: • Lead ID • Customer • Project • Status • Date Assigned Actions: • View Lead • Assign Lead • Reassign Lead • Take Back Lead Clicking a lead should open the common Lead/Customer Profile used throughout the CRM.
KPIs: • Today • Upcoming • Completed • Missed Table: • Follow-up Type • Customer • Scheduled Time • Status Sub-Admin can: • Add Follow-up • Edit • Reschedule • Mark Completed

KPIs: • Present • Absent • Leave • Half Day • Average Working Hours Attendance Table: • Date • Check-in • Check-out • Working Hours • Status Sub-Admin can: • View Attendance • Approve Attendance Corrections • Regularize Attendance

KPIs: • Total Visits • Upcoming • Completed • Cancelled Table: • Visit ID • Project • Customer • Date & Time • Status Actions: • Schedule Visit • Reassign Visit • Cancel Visit • Mark Completed

KPIs: • Assigned • Completed • Pending • Overdue Task Table: • Task Name • Due Date • Priority • Status Sub-Admin can: • Assign Task • Edit Task • Change Due Date • Mark Completed

Display: Performance KPIs: • Performance Score • Total Leads Assigned • Lead Conversion Rate • Bookings Closed • Revenue Generated • Follow-up Completion • Attendance % • Site Visits Completed • Tasks Completed Charts: • Lead Performance Trend • Lead Conversion Trend • Booking Performance • Follow-up Performance • Attendance Trend • Site Visit Trend • Task Performance Remove any Manager Remarks or Manager Feedback sections.

Display chronological employee activities. Examples: • Lead Assigned • Lead Status Changed • Follow-up Completed • Site Visit Completed • Attendance Marked • Task Assigned • Task Completed • Booking Created • Payment Collected • Login • Logout • Leave Applied

Display employee documents. Examples: • Aadhaar Card • PAN Card • Offer Letter • Employee ID • Other Documents Actions: • Upload • Replace • Download • Delete

Maintain complete activity logs. Examples: • Login History • Logout History • Device • Browser • IP Address • Last Active • Module Access • Important Actions These logs should also be available to the Admin.

Keep current table. Add: - Add Lead button - View Lead - Edit Lead - Archive/Delete (permission based) - Quick Status dropdown - Quick Assign/Reassign - Take Back option - Lead Priority badge - Project name - Budget - Configuration - Assigned Executive - Source - Last Follow-up - Next Follow-up - Site Visit Status Search by: - Lead Name - Mobile Number - Project Filters: - Status - Executive - Source - Priority Sorting: - Newest - Oldest - Budget - Last Updated Bulk Actions: - Assign - Change Status - Export - Archive Pagination: - Page Number - Rows Per Page - Total Leads

Manual Lead Creation. Fields: Customer Name. Mobile, Alternate Mobile, Email, Project, Configuration, Budget, Lead Source, Campaign, Priority, Branch, Assigned Executive, Remarks. Validation: Mandatory fields, Duplicate mobile detection, Duplicate email detection. After Save Show success message.
Create Lead Details page. Sections: Lead Information, Timeline, Notes, Follow-ups, Site Visits, Assignment History, Documents, Booking Information (if converted), Customer History, Activity Logs

Allow updating Customer Details, Project, Budget, Priority, Executive, Remarks, Status, Source, Track updated by.
Chronological timeline. Show Lead Created, Assigned, Reassigned, Status Changed, Follow-up Added, Site Visit Scheduled, Meeting Done, Notes Added, Booking Created. Every activity should store Date, Time, User

Create Follow-up Reschedule, Mark Completed, Missed Follow-up, Reminder, Next Follow-up Date, Remarks, Employee updates should instantly reflect for Admin/Sub Admin.
Schedule, Reschedule, Complete, Cancel, Fields, Date, Time, Project, Executive, Remarks, Status
Current functionality should remain. Add, Assign, Reassign, Take Back, Bulk Assign, Assignment History
Keep current flow. Upload CSV, Map Columns, Preview, Import, Results, Additional Features, Download Sample CSV, Duplicate Detection, Import Summary, Imported, Failed, Duplicate, Validation Errors
Search Lead Name, Mobile, Project. Filters: Executive, Status, Priority, Source, Branch
Allow inline status update. Stages, New, Contacted, Follow-up, Site Visit Scheduled, Negotiation, Booking, Lost, Closed. Every status update should create a timeline activity.
Bulk Assign, Reassign, Status, Change, Export, Archive, Confirmation dialog required.
When lead becomes successful Convert Lead - Customer - Booking - Payment - Possession All existing lead history should remain attached.
Above the table add: Total Leads, New Leads, Assigned, Follow-ups Today, Overdue Follow-ups, Site Visits Today, Bookings
Notify, Lead Assigned, Lead Reassigned, Follow-up Due, Site Visit Scheduled, Lead Converted, Status Changed
Log every important action Lead Created, Edited, Deleted, Imported, Assigned, Status Changed, Converted

Lead - Customer Lead - Employee Lead - Site Visit Lead - Follow-up Lead - Booking Lead - Reports Lead - Dashboard KPIs Lead - Notifications Lead - Audit Logs

Display all customers belonging to the branch. Each row should display: • Customer Name • Mobile Number • Lead Source • Assigned Employee • Customer Status • Booking Status • Last Follow-up • Next Follow-up • Created Date Support: • Search • Filters • Sorting • Pagination

Support all V1 statuses: • Active • Interested • Negotiation • Site Visit Scheduled • Site Visit Completed • Booked • Booking Cancelled • Hold • Lost • Closed Status should automatically synchronize with Lead Management and Booking Management wherever applicable.

Open complete customer profile on click. Create the following tabs: • Overview • Notes • Interested Projects • Documents • Follow-ups • Site Visits • Bookings • Activity Display: Customer Information • Name • Mobile • Alternate Mobile • Email • Address • Occupation • Company • Annual Income • Budget • Family Size Lead Information • Lead Source • Lead Status • Assigned Employee • Assigned Date • Last Follow-up • Next Follow-up • Preferred Property Type • Preferred Location • Priority Quick Summary Cards • Interested Projects • Follow-ups • Site Visits • Bookings • Uploaded Documents

Maintain complete communication history. Each note should contain: • Author • Date & Time • Note • Attachment (optional) Allow: • Add Note • Edit Own Note • Delete Own Note Maintain note history.

Display: • Project • Builder • Property Type • Budget • Location • Interest Level • Status Actions: • View Project • Schedule Site Visit

Display: • Document Name • Upload Date • Uploaded By • Verification Status Actions: • View • Download Support: • Aadhaar • PAN • Salary Slip • Bank Statement • Passport • Driving License • Company Documents • Booking Documents • Other Attachments

Display: • Date & Time • Follow-up Type • Discussion Summary • Outcome • Status Actions: • Complete • Reschedule • View Details Changes must automatically update: • Employee Dashboard • Customer Timeline • Reports • Notifications

Display: • Visit Date • Project • Assigned Employee • Visit Status • Customer Feedback Actions: • View Visit Details Site Visit data must remain synchronized with Site Visit Module.

Display: • Booking ID • Project • Unit Number • Booking Date • Booking Amount • Payment Status • Booking Status Actions: • View Booking • View Receipt If booking is cancelled: • Booking Status becomes "Cancelled" • Customer remains in Customer Module • Complete booking history remains preserved • Reports update automatically • Activity Timeline records cancellation
Maintain complete customer timeline. Automatically record: • Customer Created • Lead Assigned • Lead Transferred • Employee Changed • Follow-up Added • Follow-up Completed • Follow-up Missed • Site Visit Scheduled • Site Visit Completed • Document Uploaded • Booking Created • Booking Updated • Booking Cancelled • Notes Added • Customer Transferred • Status Changed Show: • Date • Time • User • Module • Activity
Allow Admin and Sub-Admin to transfer a customer from one employee to another. Employee cannot transfer customers. Transfer Process: Current Employee - Transfer Request - Select New Employee - Reason Mandatory - Confirm Transfer - Customer Ownership Updated During transfer automatically: • Change Assigned Employee • Transfer pending Follow-ups • Transfer pending Tasks • Transfer upcoming Site Visits • Update Employee dashboards • Update Reports • Update Notifications • Update Activity Timeline • Create Audit Log Maintain complete ownership history. Ownership history should never be deleted.

Provide filters: • Customer Status • Assigned Employee • Project • Builder • Property Type • Lead Source • Booking Status • Priority • Date Range Include keyword search: • Name • Mobile • Email
Notify Employee when: • Customer Assigned • Customer Transferred • Booking Updated • Booking Cancelled • New Follow-up Assigned • Site Visit Assigned Notify Sub-Admin when: • Booking Created • Customer Transferred • Booking Cancelled • Customer Status Updated Notify Admin when: • Customer Transferred • Booking Cancelled • High Priority Customer Updated

Create two tabs: • Attendance • Leave Management

Display KPI Cards: • Present • Absent • Late • Leave • Half Day • WFH (if enabled) Provide: • Date Filter • Employee Filter • Status Filter • Search Attendance Table: • Employee Name • Employee ID • Date • Check-In Time • Check-Out Time • Working Hours • Check-In Location • Check-Out Location • Attendance Status • Selfie Verification Actions: • View Attendance Details

Display: • Employee Information • Attendance Date • Check-In Time • Check-Out Time • Total Working Hours • Check-In Address (Auto Captured) • Check-Out Address (Auto Captured) • Latitude & Longitude (Optional) • Check-In Selfie • Check-Out Selfie • Attendance Status

Display KPI Cards: • Pending Requests • Approved • Rejected • Leave Balance Provide: • Leave Calendar • Leave Request Table Leave Table: • Employee • Leave Type • From Date • To Date • Total Days • Reason • Applied Date • Status Actions: • Approve • Reject • View Leave History When rejecting a leave request, Remarks are mandatory.

Employees can submit attendance correction requests. Sub-Admin can: • Approve • Reject Maintain correction request history.
• Employee Attendance Details Popup • Selfie Verification Status • Export Attendance (CSV / Excel) • Monthly Attendance Summary • Attendance History • Leave Balance Indicator • Attendance Correction Request • Holiday & Weekend Auto Marking

Employee • Check-In • Check-Out • Apply Leave • Request Attendance Correction During Check-In and Check-Out, the system must automatically capture: • Current GPS Location • Address • Timestamp • Selfie (if enabled) Employees are allowed to mark attendance from any location because they work in the field. No geofencing or GPS exception validation is required.

Notify Employee when: • Leave Approved • Leave Rejected • Attendance Correction Approved • Attendance Correction Rejected Notify Sub-Admin when: • New Leave Request • Attendance Correction Request Notify Admin when: • Organization Attendance Summary • Branch Leave Summary
Display: • Scheduled Today • Completed • In Progress • Missed • Rescheduled • Cancelled

Provide: • Date Filter • Status Filter • Executive Filter • Project Filter • Customer Filter • Visit Type (Lead / Customer) • Search Admin should additionally have a Branch Filter.
Display: • Visit ID • Customer Name • Lead / Customer Badge • Project • Visit Date & Time • Executive • Assigned By • Visit Type • Visit Status • Visit Outcome • Next Follow-up • Actions (View)
Opening a visit should display: • Customer Information • Lead / Customer Status • Project Details • Assigned Executive • Assigned By • Scheduled Date & Time • Check-In Time • Check-Out Time • Visit Location • Visit Notes • Customer Feedback • Uploaded Photos/Documents • Visit Outcome • Next Follow-up • Activity Timeline

Support: • Scheduled • Confirmed • In Progress • Completed • Missed • Cancelled • Rescheduled
Support: • Interested • Follow-up Required • Booking Discussion • Booked • Not Interested • Site Closed • No Response
Sub-Admin can: • Schedule Visit • View Visit • Reschedule Visit • Reassign Executive • Cancel Visit • Update Visit Status • Record Visit Outcome • Add Visit Notes Admin can additionally: • View Visits Across All Branches • Reassign Visits Between Branches (if permitted) • Override Visit Assignment
Employee • New Visit Assigned • Visit Reminder • Visit Rescheduled • Visit Cancelled Sub-Admin • Visit Completed • Missed Visit Alert • Visit Reassignment Admin • Daily Branch Visit Summary • Executive Visit Performance • Branch Visit Report
Automatically record: • Visit Scheduled • Visit Reassigned • Visit Started • Visit Completed • Visit Rescheduled • Visit Cancelled • Visit Outcome Updated

Track: • Visit Created • Visit Updated • Visit Reassigned • Visit Cancelled • Visit Rescheduled • Status Changed • Outcome Updated

Display KPI Cards: • Total Bookings • Confirmed • Pending • Payment Pending • Completed • Cancelled Provide: • Date Filter • Project Filter • Employee Filter • Status Filter • Search Admin should additionally have a Branch Filter.

Display: • Booking ID • Customer Name • Project • Unit Number • Executive • Booking Date • Booking Amount • Payment Status • Booking Status Actions: • View Booking • Edit Booking • Transfer Booking (Sub-Admin/Admin) • Cancel Booking

Display: Customer Information • Customer Name • Contact Details Booking Information • Booking ID • Booking Date • Project • Unit Number • Booking Amount • Booking Status • Payment Status • Assigned Executive • Assigned By Additional Sections • Payment Summary • Uploaded Documents • Booking Timeline • Customer Notes

Support: • Draft • Pending • Confirmed • Payment Pending • Completed • Cancelled

Record payment details only. Display: • Payment Date • Amount • Payment Mode • Receipt Number • Remarks Maintain complete payment history. No payment gateway integration in V1.
Allow upload of: • Booking Form • ID Proof • Payment Receipt • Agreement • Other Documents Maintain document history.

Lead - Qualified Lead - Customer Conversion - Customer Profile - Employee / Sub-Admin Creates Booking - Select Project - Select Unit / Inventory - Availability Check - Enter Booking Details - Upload Required Documents ↓ Record Initial Payment - Booking Created

Display
• Sale Amount
• Discount Given By
• Builder Sales Executive
• Discount Source
• Firm Discount
• Builder Discount
• Total Discount
• Final Sale Amount
• Discount Remarks
• Supporting Document
ACTIONS: Sub-Admin can
• View Discount Details
• Edit Discount Details
• Remove Discount
All changes must be recorded in Booking History and Audit Logs.
Only Sub-Admin and Admin can transfer bookings. Maintain:
• Previous Executive • New Executive • Transfer Reason • Transfer Date • Complete Transfer History

Display KPI Cards: • Total Units • Available • Reserved • Booked • Sold • Hold • Registered • Possession • Blocked Provide: • Project Filter • Tower/Wing Filter • Unit Type Filter • Status Filter • Date Filter • Search Admin should additionally have a Branch Filter.

Display: • Unit Number • Project • Tower/Wing • Floor • Unit Type • Configuration • Area • Price • Current Status • Assigned Customer • Assigned Executive Actions: • View Unit • Edit Unit • Hold / Release Unit • Transfer Unit • View History

Display: Project Information • Builder • Project • Tower/Wing • Floor Unit Information • Unit Number • Unit Type • Configuration • Carpet/Saleable Area • Price • Current Status Assignment Information • Assigned Customer • Assigned Executive Additional Sections • Booking Information • Unit Timeline • Unit History

Support: • Available • Token • Hold • Reserved • Booked • Sold • Registered • Possession • Blocked (Maintenance / Legal)

Allow Bulk Import using: • CSV • Excel Provide validation before import and display import summary with successful and failed records.

Admin - Create Builder - Create Project - Add Units / Inventory - Unit Status = Available
——————————————— Employee / Sub-Admin - View Available Inventory - Customer Interested - Create Booking - Select Unit - Availability Validation - Unit Status = Reserved - Booking Process
——————————————— Discount Required? No - Booking Confirmed - Unit Status = Booked Yes - Admin Approval - Approved - Booking Confirmed - Unit Status = Booked Rejected - Modify Booking or Cancel Request
——————————————— Booking Cancelled - Unit Status = Available ———————————————
Customer Changes Unit - Release Previous Unit - Reserve New Unit - Maintain Complete Transfer History
——————————————— Registration Completed - Status = Registered - Possession Completed - Status = Possession

Only Admin and Sub-Admin can transfer a unit before final booking confirmation. Maintain: • Previous Unit • New Unit • Transfer Reason • Transfer Date • Complete Transfer History

Display KPI Cards: • Today's Follow-ups • Pending • Completed • Missed • Rescheduled • Overdue Provide: • Date Filter • Employee Filter • Status Filter • Lead/Customer Filter • Search Admin should additionally have a Branch Filter.
Display: • Follow-up ID • Lead / Customer Name • Contact Number • Assigned Executive • Follow-up Date & Time • Follow-up Type • Status • Outcome • Next Follow-up
Actions: • View • Edit • Complete • Reschedule • Cancel

Display: Customer / Lead Information • Name • Contact Details • Source • Assigned Executive Follow-up Information • Follow-up ID • Date & Time • Follow-up Type • Status • Outcome • Notes Additional Sections • Next Follow-up • Previous Follow-up History • Activity Timeline

Support: • Scheduled • Pending • Completed • Missed • Rescheduled • Cancelled • Closed
Support: • Interested • Follow-up Required • Site Visit Scheduled • Booking Discussion • Booked • Not Interested • No Response

Lead Created - Employee Assigned - First Follow-up Scheduled - Employee Contacts Customer - Choose Outcome • Interested • Follow-up Required • Site Visit Scheduled • Booking Discussion • Not Interested • No Response - System automatically performs the related action: • Schedule Next Follow-up • Create Site Visit • Continue Customer Follow-up • Initiate Booking • Close Follow-up • Reschedule Follow-up

Employee • Follow-up Reminder • Overdue Follow-up • Reassigned Follow-up Sub-Admin • Missed Follow-up Alert • Reassigned Follow-up Admin • Daily Follow-up Summary

Automatically record: • Follow-up Created • Updated • Completed • Rescheduled • Site Visit Scheduled • Booking Discussion • Closed
Track: • Create • Update • Assign • Reassign • Complete • Cancel • Status Changes
System Event - Generate Notification - Identify Recipient • Employee • Sub-Admin • Admin - Increase Notification Badge Count - User Clicks Bell Icon - Open Notification Panel - View Notification List - Click Notification - Navigate to Related Module - Mark as Read - Notification History Updated
Display: • Unread Notification Count • All Notifications • Read / Unread Status • Notification Title • Short Description • Date & Time • Related Module • Priority (Optional)

Allow filtering by: • Date Range • Module • User • Action • Employee • Search Keyword

Track activities such as: • Create • Update • Delete • Assign • Reassign • Transfer • Approve • Reject • Cancel • Status Change • Login • Logout • Password Change

Display logs generated from: • Lead Management • Customer Management • Employee Management • Builder Management • Project Management • Inventory / Unit Management • Booking Management • Follow-up Management • Site Visit Management • Attendance & Leave • Action Center • Profile & Settings

Notes

ROLE INTEGRATION: Admin → • Assign Branch • Assign Target • Builder & Project Permissions • Discount Limits • Module Permissions • Commission Rules Sub-Admin → • Manage Branch Operations • Manage Employees • Assign/Reassign Leads • Manage Customers • Manage Bookings • Payment Collection • Attendance Monitoring Employee → • Receive Tasks • Receive Leads • Site Visits • Follow-ups • Attendance • Leave Requests

ROLE-BASED ACCESS: Employee:

• Create requests only.

Sub-Admin:
• View requests from assigned branch only.
• Cannot directly approve discounts.
• Cannot access requests from other branches.

Admin:
• Final approval authority.
• Can approve, reject, or request changes.

ROLE INTEGRATION: Admin

• Create/Edit/Delete Employees
• Transfer Employees
• View All Branch Employees
• Override Permissions
• View Employee Logs

Sub-Admin

• Manage Employees of Assigned Branch
• Edit Employee Details
• Assign Leads
• Reassign Leads
• Take Back Leads
• Assign Tasks
• Monitor Performance
• View Employee Logs
• Manage Attendance
• Manage Site Visits
• View Documents

Employee

- View Assigned Leads
- Update Lead Status
- Complete Follow-ups
- Mark Attendance
- Manage Assigned Tasks
- Upload Documents
- View Own Performance
- View Own Activity Timeline

Enhance the Lead Management module by adding a complete **Lead Transfer** feature.
Requirements:

- Add a "Transfer Lead" action in the Lead Details page.
- Only Admin and Sub-Admin can transfer leads.
- Employees cannot transfer leads directly (optional: they may request a transfer in the future).
- Allow transferring a lead from one employee to another within the permitted scope.

within the permitted scope.
- Show a confirmation modal before transfer.
- Mandatory fields:
  - New Employee
  - Transfer Reason
  - Remarks (Optional)

After successful transfer:
- Update the lead owner immediately.
- Reassign all pending follow-ups, tasks, reminders, and future site visits to the new employee.
- Notify the new employee.
- Record the transfer in Activity Timeline and Audit Logs.
- Preserve complete ownership history.

Add a new **Transfer History** section inside Lead Details showing:
- Previous Employee
- New Employee
- Transfer Date & Time
- Transferred By
- Reason
- Remarks

Do not delete previous ownership records. Maintain a complete transfer history for reporting and auditing.

Ensure this feature is linked with:
- Admin
- Sub-Admin
- Employee
- Follow-ups
- Tasks
- Site Visits
- Notifications
- Activity Timeline
- Reports
- Audit Logs

Keep the UI consistent with the existing CRM design and use realistic dummy data for transfer history.

ROLE-BASED ACCESS: Employee
• View only assigned customers
• Add Notes
• Manage Follow-ups
• Manage Site Visits
• Upload Documents
• Cannot Transfer Customer
• Cannot Delete Customer

Sub-Admin
• View customers within assigned branch
• Transfer Customer
• Change Assigned Employee
• View Customer History
• Manage Customer Information

Admin
• Full customer access
• Transfer across branches if permitted
• Edit Customer
• View Ownership History
• Manage Customer Lifecycle

Super Admin
• Read-only visibility through reports, dashboards, and audit logs.
• No day-to-day customer operations. MODULE INTEGRATION: Synchronize Customer Management with:
• Lead Management
• Employee Management
• Booking Management
• Payment Management
• Follow-ups
• Site Visits
• Tasks
• Reports
• Dashboard KPIs
• Notifications
• Activity Timeline
• Audit Logs

No duplicate customer records should be created.

Maintain a single customer record throughout the complete lifecycle.

ROLE-BASED ACCESS: Employee

• Mark Attendance
• Apply Leave
• Request Attendance Correction
• View Own Attendance
• View Own Leave History

Sub-Admin

• View Branch Attendance
• Approve / Reject Leave
• Approve Attendance Corrections
• View Attendance History
• Export Attendance
• View Branch Reports

Admin

• View Attendance Across All Branches
• View Leave Across All Branches
• Override Attendance (if permitted)
• View Organization Reports

Super Admin

• Read-only access through Reports, Dashboard, and Audit Logs.
• No operational attendance management.

MODULE INTEGRATION: Attendance and Leave Management must automatically synchronize with:

• Employee Management
• Employee Profile
• Employee Performance
• Employee Dashboard
• Sub-Admin Dashboard
• Admin Dashboard
• Reports & Analytics
• Attendance History
• Leave Balance
• Activity Timeline
• Notifications
• Audit Logs

Every attendance or leave action should immediately update all related modules and dashboards while maintaining a single source of truth.

WORKFLOW: Employee • Receive Visit Assignment • View Assigned Visits • Navigate to Site • Check-In • Meet

Customer • Update Visit Status • Add Visit Notes • Record Outcome • Schedule Follow-up (if required) • Check-Out The system should automatically capture: • Check-In Time • Check-Out Time • Visit Location • Timestamp LEAD MANAGEMENT INTEGRATION: If the visitor is a Lead: Automatically update: • Lead Timeline • Visit Count • Last Visit Date • Follow-up Schedule • Lead Stage (if updated) CUSTOMER MANAGEMENT INTEGRATION: If the visitor is an Existing Customer: Automatically update: • Customer Timeline • Site Visit History • Interested Projects • Booking Journey
EMPLOYEE MANAGEMENT INTEGRATION: Automatically update: • Assigned Visits • Completed Visits • Missed Visits • Employee Performance • Employee Activity Timeline
ATTENDANCE INTEGRATION: When an employee performs Check-In and Check-Out during a site visit: Automatically record: • Check-In Location • Check-Out Location • Visit Timestamp Link the visit with the employee's attendance record for that day without changing attendance rules.
DASHBOARD INTEGRATION: Employee Dashboard • Today's Visits • Upcoming Visits • Completed Visits Sub-Admin Dashboard • Branch Visits • Missed Visits • Visit Completion Rate Admin Dashboard • Branch-wise Visits • Executive Performance • Visit Conversion Summary
REPORTS INTEGRATION: Automatically update: • Site Visit Report • Executive Visit Report • Project Visit Report • Lead Conversion Report • Customer Visit Report ROLE-BASED ACCESS: Employee

- View Assigned Visits
- Check-In
- Check-Out
- Update Visit Status
- Add Notes
- Record Outcome

Sub-Admin

• Manage Branch Visits
• Schedule Visits
• Assign/Reassign Executives
• View Visit History
• Monitor Visit Progress
• Export Visit Data
Admin
• View All Branch Visits
• Monitor Branch Performance
• Override Visit Assignments (if permitted)
Super Admin
• Read-only access through Reports, Dashboard, and Audit Logs.
• No operational site visit management.

ROLE-BASED ACCESS: Employee
• Create Booking
• View Own Bookings
• Record Payments
• Upload Documents
Sub-Admin
• Create Booking
• Edit Booking
• Transfer Booking
• View Branch Bookings
• Manage Payments
• Manage Documents
Admin
• View All Branch Bookings
• Approve Discount Requests
• Override Booking (if permitted)
• Transfer Between Branches (if permitted)
Super Admin
• Read-only through Dashboard, Reports, and Audit Logs.

MODULE INTEGRATION: Lead Management
Automatically:
• Convert Lead to Customer
• Update Lead Timeline
• Mark Lead as Converted
Customer Management
Automatically update:
• Booking History

• Booking History
• Purchased Properties
• Payment History
• Customer Timeline

Project & Inventory

Automatically:
• Verify Unit Availability
• Mark Unit as Booked
• Update Inventory Status

Employee Management

Automatically update:
• Total Bookings
• Booking Value
• Employee Performance
• Employee Activity Timeline

Site Visits

Automatically link:
• Previous Site Visits
• Visit Outcome
• Visit History

Attendance

If booking is completed during a customer visit:
• Link booking activity with that day's attendance record.

Dashboard

Employee
• My Bookings

• Profile Updated
• Password Changed
• Notification Preference Updated
• Security Changes

ROLE-BASED ACCESS: Employee
• No Access
Sub-Admin
• View Branch Audit Logs Only
Admin
• View Company Audit Logs
Super Admin
• View Platform-wide Audit Logs

Design Requirements

Generate the UI/UX for this module by following these Common Design Requirements. These requirements apply to every screen, tab, popup, drawer, table, form, dashboard, and workflow for all roles (Admin, Sub-Admin, and Employee). Do not change any existing business logic, permissions, workflows, or data structure already defined. These requirements are only for design and user experience.

COMMON DESIGN REQUIREMENTS

1. Design Philosophy
- Prioritize UX over visual effects.
- Keep interfaces simple, clean, modern, professional, and scalable.
- Reduce user clicks wherever possible.
- Maintain consistency across all modules.
- Every screen should be responsive and production-ready.
- Design should support future feature expansion without redesign.

2. Layout
- Maintain consistent page structure throughout the application.
- Header, filters, content area, action buttons, and footer spacing should remain consistent.
- Use proper visual hierarchy.
- Keep sufficient white space.
- Follow consistent spacing, padding, margins, and alignment.
- Maintain consistent card, table, and form widths.

3. Navigation
- Active menu should always be highlighted.
- Breadcrumbs wherever required.
- Page title should clearly identify current location.
- Frequently used actions should be easily accessible.
- Avoid unnecessary navigation steps.

4. Dashboard Design
- KPI cards should have consistent style.

- Charts should be clean and readable.
- Show empty state when data is unavailable.
- Support loading and error states.
- Cards should be clickable only where applicable.

5. Tables
- Sticky table header.
- Sticky action column when necessary.
- Sorting.
- Searching.
- Filtering.
- Pagination.
- Adjustable rows per page.
- Column visibility management if required.
- Proper alignment of numbers, text, dates, and currency.
- Long text should truncate with tooltip.
- Status should use colored badges.
- Row selection where applicable.
- Bulk selection only where allowed.
- Export option only if already defined in existing flow.
- No horizontal scrolling unless absolutely necessary.

6. Search & Filters
- Global search where applicable.
- Instant search with debounce.
- Advanced filters inside expandable panel or drawer.
- Filter chips showing active filters.
- Clear All filters.
- Remember filter state until page refresh if applicable.
- Date range picker where applicable.

7. Forms
- Group related fields logically.
- Clearly distinguish mandatory and optional fields.
- Proper labels and placeholders.
- Inline validation.
- Real-time validation wherever possible.
- Helpful error messages.
- Character counters where needed.
- Auto focus on first field.
- Keyboard accessible.
- Prevent accidental data loss.
- Warn before leaving unsaved form.

8. Buttons

8. Buttons
- Maintain consistent hierarchy:
  - Primary
  - Secondary
  - Tertiary
  - Danger
- Disable buttons when action is not allowed.
- Show loading state after click.
- Prevent duplicate submissions.

9. Modals / Dialogs / Drawers
- Use confirmation dialog for destructive actions.
- Close confirmation if unsaved changes exist.
- Proper titles.
- Clear primary action.
- Proper secondary action.
- ESC support where appropriate.

10. Status System
Maintain consistent status colors across entire CRM.

Examples:
- Success
- Pending
- Approved
- Rejected
- Cancelled
- Active
- Inactive
- Completed
- Draft
- Overdue

Never use inconsistent colors for same status.

11. Notifications
- Success messages.
- Error messages.
- Warning messages.
- Informational messages.
- Non-blocking toast where appropriate.
- Confirmation messages after successful actions.

12. Loading States
- Skeleton loaders.
- Spinner only when required.
- Progressive loading wherever possible.
- Empty state illustrations/messages.

13. Error Handling
- Friendly error messages.
- Retry option.
- Validation errors clearly highlighted.
- Network failure handling.
- Permission error handling.
- Record not found state.

14. Accessibility
- Proper contrast ratio.
- Keyboard navigation.
- Screen-reader friendly labels.
- Focus indicators.
- Accessible form controls.
- Do not rely only on color.

15. Mobile & Responsive
- Fully responsive.
- Tablet support.
- Mobile support where applicable.
- Proper stacking of cards.
- Responsive tables.
- Responsive filters.
- Responsive forms.

16. Icons
- Use meaningful icons.
- Keep icon style consistent.
- Do not overuse icons.
- Every action icon should have tooltip.

17. Color Usage
- Use semantic colors only.
- Keep primary actions visually consistent.
- Do not use random colors.
- Warning and destructive actions should be visually distinguishable.

18. Typography
- Maintain consistent heading hierarchy.
- Consistent font sizes.

- Proper line height.
- Good readability.
- Consistent text styles.

19. Empty States
Every empty screen should explain:
- Why no data exists.
- What user can do next.
- CTA button if applicable.

20. Action Visibility
Display actions strictly according to existing role permissions already defined.
Do not expose actions users cannot perform.
Do not modify permission logic.

21. History & Logs
Whenever history, timeline, activity log, audit trail, approval history, transfer history, booking history, customer history, lead history, or any existing log is part of the defined workflow:
- Show records in chronological order.
- Display timestamp.
- Display user who performed the action.
- Display previous value and new value where applicable.
- Keep history read-only.
- Never allow editing of historical records.

22. Approval Screens
If a module contains approval workflow already defined:
- Clearly show request status.
- Show requester.
- Show approver.
- Show request date.
- Show approval history.
- Show remarks if available.
- Highlight pending actions.

23. Data Safety
- Confirmation before destructive actions.
- Soft delete visualization if applicable.
- Prevent duplicate records where applicable.
- Auto-save only if already defined.
- Do not change business rules.

24. Consistency

24. Consistency
All modules must use:
- Same spacing
- Same cards
- Same tables
- Same forms
- Same buttons
- Same filters
- Same badges
- Same typography
- Same color system
- Same interaction patterns

25. Performance UX
- Fast page rendering.
- Lazy loading where applicable.
- Minimize unnecessary animations.
- Keep interactions smooth.

26. Design System
Use reusable components only.
Maintain consistency with the existing CRM design system.
Avoid creating duplicate UI patterns.

27. Existing Flow Protection
These design requirements must work with the existing Admin, Sub-Admin, and Employee modules already defined.
Do not modify:
- Business logic
- User roles
- Permissions
- Approval hierarchy

What to do

Dashboard

Subtitle: Track today's work, manage daily activities, and monitor your sales performance.

Display

- Welcome Message
- Employee Name
- Current Date
- Notification Bell
- Profile Avatar

Purpose

Provide a personalized start to the workday with quick access to notifications and profile.

Display

- My Leads
- Today's Follow-ups
- Today's Site Visits
- This Month Bookings

Each card should display

- Count
- Small icon
- Quick navigation

Purpose

Provide a quick overview of today's workload.

Display

Personal task planner for managing daily work.

Employee can

- Add New Task
- Edit Task
- Delete Task (before completion)
- Mark Task as Complete
- Reopen Completed Task

Task Fields: • Task Title • Description (Optional) • Due Date • Due Time • Priority- High, Medium, Low

- Related To (Optional)- Lead, Customer, Booking. Status- Pending, Completed, Overdue (Auto Highlight).

Display -Pending Task Counter, Completed Task Counter

Quick Actions- Mark Complete, Edit, Delete

Purpose

Help employees organize and complete their daily personal tasks

Display
Today's scheduled follow-ups.
Each Follow-up Card
• Customer Name
• Contact Number
• Follow-up Time
• Lead Status
Quick Actions
• Call Customer
• Mark Completed
• Reschedule
Purpose: Allow employees to quickly manage scheduled follow-ups.
Display
Today's scheduled property visits.
Each Card
• Customer Name
• Project Name
• Property Unit
• Visit Time
Quick Actions
• Navigate
• Check-In
• Mark Completed
Purpose: Help employees manage site visits efficiently.
Display recently assigned leads.

Notes

BUSINESS RULES: Employee should only see their own data.
Do NOT display
• Branch Analytics
• Company Revenue
• Employee Management
• Approval Requests
• Financial Reports
• Admin Controls
• Sub-Admin Controls
All dashboard information should update automatically based on the employee's activities.

Design Requirements

Generate the UI/UX for this module by following these Common Design Requirements. These requirements apply to every screen, tab, popup, drawer, table, form, dashboard, and workflow for all roles (Admin, Sub-Admin, and Employee). Do not change any existing business logic, permissions, workflows, or data structure already defined. These requirements are only for design and user experience.

COMMON DESIGN REQUIREMENTS

1. Design Philosophy
- Prioritize UX over visual effects.
- Keep interfaces simple, clean, modern, professional, and scalable.
- Reduce user clicks wherever possible.
- Maintain consistency across all modules.
- Every screen should be responsive and production-ready.
- Design should support future feature expansion without redesign.

2. Layout
- Maintain consistent page structure throughout the application.
- Header, filters, content area, action buttons, and footer spacing should remain consistent.
- Use proper visual hierarchy.
- Keep sufficient white space.
- Follow consistent spacing, padding, margins, and alignment.
- Maintain consistent card, table, and form widths.

3. Navigation
- Active menu should always be highlighted.
- Breadcrumbs wherever required.
- Page title should clearly identify current location.
- Frequently used actions should be easily accessible.
- Avoid unnecessary navigation steps

- Avoid unnecessary navigation steps.

4. Dashboard Design
- KPI cards should have consistent style.
- Charts should be clean and readable.
- Show empty state when data is unavailable.
- Support loading and error states.
- Cards should be clickable only where applicable.

5. Tables
- Sticky table header.
- Sticky action column when necessary.
- Sorting.
- Searching.
- Filtering.
- Pagination.
- Adjustable rows per page.
- Column visibility management if required.
- Proper alignment of numbers, text, dates, and currency.
- Long text should truncate with tooltip.
- Status should use colored badges.
- Row selection where applicable.
- Bulk selection only where allowed.
- Export option only if already defined in existing flow.
- No horizontal scrolling unless absolutely necessary.

6. Search & Filters
- Global search where applicable.
- Instant search with debounce.
- Advanced filters inside expandable panel or drawer.
- Filter chips showing active filters.
- Clear All filters.
- Remember filter state until page refresh if applicable.
- Date range picker where applicable.

7. Forms
- Group related fields logically.
- Clearly distinguish mandatory and optional fields.
- Proper labels and placeholders.
- Inline validation.
- Real-time validation wherever possible.
- Helpful error messages.

- Helpful error messages.
- Character counters where needed.
- Auto focus on first field.
- Keyboard accessible.
- Prevent accidental data loss.
- Warn before leaving unsaved form.

8. Buttons
- Maintain consistent hierarchy:
  - Primary
  - Secondary
  - Tertiary
  - Danger
- Disable buttons when action is not allowed.
- Show loading state after click.
- Prevent duplicate submissions.

9. Modals / Dialogs / Drawers
- Use confirmation dialog for destructive actions.
- Close confirmation if unsaved changes exist.
- Proper titles.
- Clear primary action.
- Proper secondary action.
- ESC support where appropriate.

10. Status System
Maintain consistent status colors across entire CRM.

Examples:
- Success
- Pending
- Approved
- Rejected
- Cancelled
- Active
- Inactive
- Completed
- Draft
- Overdue

Never use inconsistent colors for same status.

11. Notifications
- Success messages.
- Error messages

BUSINESS RULES: Employees can view only their assigned leads.
Employees can
• Create Lead
• Edit Assigned Lead
• Update Lead Stage
• Add Notes
• Schedule Follow-ups
• Schedule Site Visits
• Convert Lead to Customer
• Request Lead Transfer
Employees cannot
• Delete Leads
• View Other Employees' Leads
• Reassign Leads Directly
• Permanently Delete Customer Data
Every activity should automatically update the lead timeline.

- Error messages.
- Warning messages.
- Informational messages.
- Non-blocking toast where appropriate.
- Confirmation messages after successful actions.

12. Loading States
- Skeleton loaders.
- Spinner only when required.
- Progressive loading wherever possible.
- Empty state illustrations/messages.

13. Error Handling
- Friendly error messages.
- Retry option.
- Validation errors clearly highlighted.
- Network failure handling.
- Permission error handling.
- Record not found state.

14. Accessibility
- Proper contrast ratio.
- Keyboard navigation.
- Screen-reader friendly labels.
- Focus indicators.
- Accessible form controls.
- Do not rely only on color.

15. Mobile & Responsive
- Fully responsive.
- Tablet support.
- Mobile support where applicable.
- Proper stacking of cards.
- Responsive tables.
- Responsive filters.
- Responsive forms.

16. Icons
- Use meaningful icons.
- Keep icon style consistent.
- Do not overuse icons.
- Every action icon should have tooltip

- Every action icon should have tooltip.

17. Color Usage
- Use semantic colors only.
- Keep primary actions visually consistent.
- Do not use random colors.
- Warning and destructive actions should be visually distinguishable.

18. Typography
- Maintain consistent heading hierarchy.
- Consistent font sizes.
- Proper line height.
- Good readability.
- Consistent text styles.

19. Empty States
Every empty screen should explain:
- Why no data exists.
- What user can do next.
- CTA button if applicable.

20. Action Visibility
Display actions strictly according to existing role permissions already defined.
Do not expose actions users cannot perform.
Do not modify permission logic.

21. History & Logs
Whenever history, timeline, activity log, audit trail, approval history, transfer history, booking history, customer history, lead history, or any existing log is part of the defined workflow:
- Show records in chronological order.
- Display timestamp.
- Display user who performed the action.
- Display previous value and new value where applicable.
- Keep history read-only.
- Never allow editing of historical records.

22. Approval Screens
If a module contains approval workflow already defined:
- Clearly show request status.
- Show requester

BUSINESS RULES: Employees can view only their assigned customers.
Employees can
• View Customers
• Edit Customer Details
• Add Notes
• Upload Documents
• Schedule Follow-ups
• Schedule Site Visits

• Create Booking
• Request Customer Transfer
Employees cannot
• Delete Customers
• Transfer Customers Directly
• View Other Employees' Customers
• Modify Booking Approval Details
Every customer activity should automatically update the customer timeline.

- Show requester.
- Show approver.
- Show request date.
- Show approval history.
- Show remarks if available.
- Highlight pending actions.

23. Data Safety
- Confirmation before destructive actions.
- Soft delete visualization if applicable.
- Prevent duplicate records where applicable.
- Auto-save only if already defined.
- Do not change business rules.

24. Consistency
All modules must use:
- Same spacing
- Same cards
- Same tables
- Same forms
- Same buttons
- Same filters
- Same badges
- Same typography
- Same color system
- Same interaction patterns

25. Performance UX
- Fast page rendering.
- Lazy loading where applicable.
- Minimize unnecessary animations

- Minimize unnecessary animations.
- Keep interactions smooth.

26. Design System
Use reusable components only.
Maintain consistency with the existing CRM design system.
Avoid creating duplicate UI patterns.

27. Existing Flow Protection
These design requirements must work with the existing Admin, Sub-Admin, and Employee modules already defined.
Do not modify:
- Business logic
- User roles

BUSINESS RULES: Employees can view only their assigned site visits.
Employees can

• Schedule Site Visit
• Edit Upcoming Visits
• Check-In
• Record Feedback
• Mark Visit Completed
• Reschedule Visit

Employees cannot

• Delete Visit Records
• View Other Employees' Visits
• Modify Completed Visit History

Every visit activity should automatically update the customer and lead timeline.

BUSINESS RULES: Employees can
• Create Booking
• Edit Draft Bookings
• Record Payments
• Upload Documents
• Request Discount
• Request Booking Cancellation
Employees cannot
• Approve Discounts
• Cancel Confirmed Bookings
• Modify Inventory
• Allocate Units
• View Other Employees' Bookings
Booking should be created only after the customer is available in the CRM.
Every booking activity should automatically update the customer timeline.
Employees can
• Enter discount information
• Select who provided the discount
• Select Builder Sales Executive
• Upload supporting documents
Employees cannot

BUSINESS RULES: Employees can
• Create Follow-ups
• Edit Upcoming Follow-ups
• Mark Follow-ups Completed
• Reschedule Follow-ups
• Add Conversation Notes
Employees cannot
• Delete Completed Follow-ups
• View Other Employees' Follow-ups
Every completed follow-up should automatically update the Lead or Customer timeline.
Follow-up reminders should be generated automatically before the scheduled time.

BUSINESS RULES: Employees can
• View Assigned Tasks
• Update Progress
• Add Comments
• Upload Attachments
• Mark Tasks Completed
Employees cannot
• Create Official Tasks
• Assign Tasks
• Reassign Tasks
• Delete Tasks
• Edit Task Details assigned by Admin/Sub-Admin
Completed tasks become read-only except for viewing history.

BUSINESS RULES: Employees can

- Check-In
- Check-Out
- View Attendance History
- View Working Hours

Employees cannot

- Edit Attendance Records
- Delete Attendance Records

• Mark Attendance for Previous Dates
GPS location should be captured automatically during both Check-In and Check-Out.
Attendance status should be calculated automatically based on company attendance policies.
Once Check-Out is completed, attendance for that day becomes read-only.

BUSINESS RULES: Employees can

- Apply for Leave
- View Leave History
- View Leave Balance
- Upload Supporting Documents
- Cancel Pending Requests

Employees cannot

- Approve Leave
- Reject Leave
- Modify Approved Leave
- Delete Leave Records

Leave balance should automatically update after approval.

Approved leave should automatically reflect in the Attendance module.

BUSINESS RULES: Employees can
• View Their Own Performance
• View Target Progress
• View Activity Summary
• View Monthly Trends
Employees cannot
• Edit Performance Data
• Modify Targets
• Access Other Employees'

Performance

• Change Performance Calculations

All performance metrics should be automatically calculated from completed CRM activities.

BUSINESS RULES: Employees can

• View Notifications

• Mark Notification as Read

• Mark All Notifications as Read
Employees cannot
• Create Notifications
• Delete System Notifications
• Broadcast Notifications
Notifications should be generated automatically based on CRM events.
Unread notifications should display a badge count on the Notification Bell.

BUSINESS RULES: Employees can
• View Their Profile
• Update Personal Information

• Change Password
• Manage Personal Preferences
• View Allowed Documents

Employees cannot

• Change Employee ID
• Change Employee Code
• Change Role
• Change Branch
• Change Reporting Manager
• Modify Employment Details

All profile updates should be recorded in the audit history.

Password changes should require the current password for verification.

BUSINESS RULES: Employees can

- View Builders
- View Projects
- View Towers
- View Floors
- View Units
- Search Inventory
- Filter Inventory
- View Property Details
- Schedule Site Visit

• Create Booking
• Share Property Information

Employees cannot

• Create Builder
• Edit Builder
• Delete Builder
• Create Project
• Edit Project
• Delete Project
• Create Tower
• Create Floor
• Create Unit
• Edit Unit Details
• Change Unit Availability
• Reserve Inventory
• Block Inventory

Inventory availability should update automatically based on booking activities.

Only Available units should allow booking creation.
